

Perry Johnson Registrar's **QUALITY POLICY STATEMENT**

Through a strategy of continuous improvement and teamwork, and in accordance with the requirements set forth by the international standards organizations, Perry Johnson Registrars, Inc. is dedicated to differentiating itself as an effective provider of certification services, as well as ensuring that we create value for our customers, industry stakeholders, and employees.

The foundation for achieving our objective is based upon our commitment to provide our clients with the highest level of service to assist with their success in the global marketplace.

PJR understands the importance of impartiality in carrying out its management system certification activities, manages conflict of interest, and ensures the objectivity of its management certification activities. PJR further supports a policy of public access and disclosure of information regarding its certification processes and status of certified organizations, and is responsive to complaints about its activities and the activities of its certified clients.

The entire PJR team adheres to the spirit of this quality policy as well as the directives of the Quality Manual and its subordinate documents.

Responsible Recycling Certification

*Your partner in
R2: Responsible Recycling
certification*

Your full service registrar offering **Responsible Recycling (R2) Certification**

RESPONSIBLE RECYCLING – WHY CONSIDER R2?

EPA as part of a group of recycle stakeholders developed the Reuse, Recycle Practice to promote better environmental, worker health and safety, data security, and public health practices for electronic-waste recyclers. The resulting R2 PRACTICES STANDARD also provides assurance to the American Public that their electronic waste is being handled according to U.S. and International Laws.

- “These voluntary guidelines will help assure Americans that their used electronics will be recycled safely and responsibly” – Susan Parker Bodine, Assistant Administrator for EPA’s Office of Solid Waste and Emergency Response – October, 31, 2008
- Instill Public Confidence Through Certified Third Party Review of Recycler Practices
- Ensure Downstream Control of the Recycling Chain
- Minimize Environmental and Health Risks Show Conformity With Domestic and International Laws
- Minimize Liability For Recyclers
- Promote Insurance Cost Reduction for Recyclers
- Assist Original Equipment Manufacturers (OEM’s) With Due Diligence of Their End-Of-Life Electronics
- Oversight by ANSI-ASQ National Accreditation Board (ANAB)

Perry Johnson Registrars, Inc.

One of the largest Registrars in the United States & Worldwide.

While recycling events are on the rise in the U.S., and consumers and corporations are more conscious about recycling, the problem is that some recyclers have not properly managed final recovery and disposal of these wastes. In doing this, you can instill public confidence through certified third party review of recycler practices.

Responsible Recycling Practices R2:2013 is an updated version of the R2 standard that keeps recyclers accountable, offers a seal of approval for responsible recyclers and waste management companies, protects employees throughout the supply chain, and protects the people in the developing world who are exposed to the hazards of e-waste. Supported by the Environmental Protection Agency (EPA), R2 is a set of principles and specific practices that recyclers disassembling or reclaiming used electronics equipment must adhere to. These guidelines call for the establishment and use of a management system that covers environmental, worker safety, and public health practices on-site and downstream management of end-of-life equipment and material (EPA.gov, *Responsible Recycling Practices*).

R2 ensures that the recycler complies with environmental, health, and safety legal requirements that are applicable to the recyclers’ operations. ‘Going Green’ is not just a trend or initiative asserted by environmental protection groups anymore, it has become a business strategy for promoting environmentally responsible practices to conscious customers while positively impacting the bottom line.

In order to become 3rd party certified to R2:2013, an e-waste company must also be certified to ISO 14001 and OHSAS 18001 and/or RIOS. While ISO 9001 is not necessary for R2 certification, an e-waste company would benefit from implementing one to help meet the Quality Assurance requirements within the R2:2013 Standard. R2:2013 certification is a two-stage audit process, as are most management system standards.
